

UNC CFAR Social and Behavioral Science Research Core SABI Database

INSTRUMENT TITLE: *Mausbach Self-Efficacy for Condom Use*

SOURCE ARTICLE: Mausbach, B. T., Semple, S. J., Strathdee, S. A., Zians, J., & Patterson, T. L. (2007). Effectiveness of a behavioral intervention for increasing safer sex behaviors in HIV-positive MSM methamphetamine users: Results from the EDGE study. *Drug and Alcohol Dependence*, 87(2-3), 249.

RESPONSE OPTIONS AND SCORING: Responses for each item ranged from 0="strongly disagree" to 3="strongly agree". Responses to these nine items were summed to create an overall self-efficacy score (range = 0–27).

SURVEY ITEMS:

1. I can use a condom properly
2. I can use a condom every time I have penetrative sex
3. I can have condoms available every time I have penetrative sex
4. I can use a condom in any situation
5. I can interrupt sex to use a condom
6. I can use a condom without any instruction
7. I can use a condom for penetrative sex while under the influence of drugs or alcohol
8. I can delay penetrative sex if a condom is not available
9. I can use a condom for penetrative sex even when I am very sexually aroused

TERMS OF USE:

Individuals may use this information for research or educational purposes only and may not use this information for commercial purposes. When using this instrument, please cite:
