

UNC CFAR Social and Behavioral Science Research Core SABI Database

INSTRUMENT TITLE: VAS: Visual Analogue Scale

SOURCE ARTICLE: Corless, I. B., Hoyt, A. J., Tyer-Viola, L., Sefcik, E., Kemppainen, J., Holzemer, W. L., ... & Rivero-Mendez, M. (2017). 90-90-90-Plus: Maintaining adherence to antiretroviral therapies. AIDS patient care and STDs, 31(5), 227-236.

POPULATION: Women, men, HIV-positive

RESPONSE OPTIONS: Scale of 0% to 100%.

SCORING: Used cutoffs at 95% and 60%; gave categories of High adherence: 95%-100%;

Medium: 61-94%; Low: 1-60%; and None

SURVEY ITEMS: Participants are queried about their medication use and asked to indicate on a scale of 0% to 100% how much of the time in the past 30 days they have taken their medication.

RELIABILITY INFORMATION: No reliability information reported.

VALIDITY INFORMATION: Convergent validity assessed via examination of association with 13 scales of related constructs or predictors of adherence.

TERMS OF USE:

Individuals may use this information for research or educational purposes <u>only</u> and may not use this information for commercial purposes. When using this instrument, please cite:
